Dear Town of Tunica water customer:

The Town of Tunica is in the process of replacing all of the water meters in our service area with an Automatic Drive-By Radio Read meter. The Town has contracted with Vanguard Utility Service, Inc., an experienced meter installation contractor, for the new meter installation. There is no cost to the customer for this meter replacement. The new system will provide a more accurate recording of water consumption using drive-by reading technology and has the capability of providing leak detection.

Your first bill after the new meter is installed will show and bill you for the consumption on your old meter to the point it was removed. And, then, the new meter starting at 0 to whatever it reads when we read for the billing cycle. Older meters tend to run slower and therefore do not measure all of the water going through them. The new meters will accurately measure water used. If you see a higher bill, it is not because your new meter is reading too high; it is because the old meter was running slow. The Town will not back bill customers for older meters running slow.

Please visit <http://townoftunica.com/departments/water-department/amr-faqs> for more information about the new AMR meters.

Thank you for your cooperation and patience during this time.
